this book examines the question of why play is a happy and benevolent verb in childhood yet a subjective label of behaviour in adulthood it studies the transformation of the positively labelled term child s play used to refer to our early years into an aberrance or deviation from normal social relationships in later life when we speak of playing up or playing around it answers the question by proposing play as a theory of learning an ideology that circumscribes behaviour and a way of thinking written by scholars of early childhood through to further and higher education the book presents research on play enacted in a way that arches beyond the specificity of age groups or predictive normative patterns it is international in its focus moving beyond insular inward and parochial educational standards and limitations in one city province state or nation finally it demonstrates the value of play to educational policy and theories of learning
